
NON-COMMUNITY HOSPITALS

INTRODUCTION

In addition to the 50 community hospitals in South Dakota, there were 16 non-community hospitals in 2007. PHS Indian Hospital in Sisseton converted to an Ambulatory Health Care Center in 2007. Each hospital provided varying degrees of emergency, acute, intensive, skilled nursing or specialty care. All non-community hospitals have the capability of providing acute care, which differentiates them from nursing facilities, which do not have that capability.

RESOURCES

Facilities

Hospitals are categorized as non-community hospitals because of access requirements or the specialized nature of the care they provide. In 2007, South Dakota's 16 non-community hospitals were comprised of two Veteran's Administration hospitals, four Indian Health Services hospitals, and 10 specialized hospitals. Of these hospitals, the only hospitals licensed by the state are the 10 specialized hospitals.

NOTE: *The number of non-community hospitals that submit their AHA Survey in any given year fluctuates greatly, making it difficult to track the trends in data related to non-community hospitals. Therefore, the data for non-reporting, non-community hospitals was extrapolated in 2003, 2004, 2005, 2006, and 2007 to allow the comparison of trends for non-community hospital resources and utilization statistics. The report notes the instances where the data is extrapolated by bolding the data and shading the area around it. In addition, a note is added below the table to indicate further that the data has been extrapolated.*

NON-COMMUNITY HOSPITALS

Beds

Table 17, below, displays the number of beds per facility for the years 2003 to 2007. From 2006 to 2007, the total non-community hospital beds in South Dakota increased by four. Table 18, page 23, compares the number of beds in South Dakota non-community hospitals and community hospitals. During the past five years, the percent of hospital beds that are housed in non-community hospitals has held steady around 22 percent.

UTILIZATION

General Trends

Table 19, below, tracks selected utilization statistics for the non-community hospitals from 2003 to 2007. Utilization showed that beds set up and staffed increased by four and there was also an increase in discharges (see Appendix A for explanation of discharges) as well as an increase in inpatient days for 2007.

Table 19
Selected Statistics for South Dakota Non-community Hospitals, 2003-2007

YEAR	BEDS SET UP AND STAFFED	DISCHARGES	INPATIENT DAYS	AVERAGE LENGTH OF STAY
2003	825	13,087	153,329	11.7
2004	854	12,505	159,795	12.8
2005	825	12,872	147,106	11.4
2006	825	13,298	143,704	10.8
2007	829	13,838	143,903	10.4

NOTE: The shaded data in Table 19 are based on extrapolated data.

SOURCE: South Dakota Department of Health; Office of Data, Statistics, and Vital Records.

Discharges

Table 20, page 24, displays the non-community hospital discharges by facility. The five-year high during the period presented occurred in 2007. In 2007, there was an increase in the number of discharges by 540 discharges or 4.1 percent. Table 21, page 24, shows total discharges for community hospitals and non-community hospitals.

NON-COMMUNITY HOSPITALS

Table 23, below, displays inpatient days for South Dakota community and non-community hospitals. In addition, it displays the percent of inpatient days completed by non-community hospitals. The percentage of non-community hospital inpatient days over the last five years has been decreasing to a five-year low of 24.2 percent in 2007.

Table 23
Inpatient Days by South Dakota Community and Non-community Hospitals, 2003-2007

Inpatient Days	2003	2004	2005	2006	2007
Community Hospital Inpatient Days	442,845	464,315	446,534	436,080	450,962
